

MINI PROJECT REPORT

EXPENSE TRACKER

Submitted By: Thrividha

Roll Number: 2025DAMBT10293

Department:

Computer Science and Engineering(Artificial Intelligence And Machine Learning)

College Name:

Vasireddy Venkatadri International Technological University

Academic Year:

2025-2026

1. INTRODUCTION

Expense Tracker is a Python-based application that helps users record and manage their daily expenses. The system allows users to add expenses, view expense details, calculate total spending, and delete expense records. This project demonstrates the practical implementation of Python programming concepts and helps users monitor their financial activities.

2. OBJECTIVES

- To develop a simple expense management application.
- To understand Python programming fundamentals.
- To implement lists, dictionaries, functions, and loops.
- To calculate total expenses automatically.

3. SOFTWARE REQUIREMENTS

- Python 3.x
- Visual Studio Code / PyCharm
- Windows or Linux Operating System

4. SYSTEM DESIGN

User

|

v

Expense Tracker

|

+--> Add Expense

+--> View Expenses

+--> Delete Expense

+--> Calculate Total Expense

5. MODULES

5.1 Add Expense

Allows users to enter the expense name and amount.

5.2 View Expenses

Displays all recorded expenses.

5.3 Delete Expense

Removes a selected expense from the list.

5.4 Calculate Total Expense

Calculates the total amount spent.

6. SOURCE CODE

```
expenses = []

def add_expense():
    name = input("Enter Expense Name: ")
    amount = float(input("Enter Expense Amount: ₹"))

    expenses.append({
        "name": name,
        "amount": amount
    })

    print("Expense Added Successfully!")

def view_expenses():
    if len(expenses) == 0:
        print("\nNo Expenses Found.")
        return

    print("\n----- Expense List -----")
    for i, expense in enumerate(expenses, start=1):
        print(f"{i}. {expense['name']} - ₹{expense['amount']}")

def total_expense():
    total = sum(expense['amount'] for expense in expenses)
    print(f"\nTotal Expense: ₹{total}")

def delete_expense():
    view_expenses()

    if len(expenses) == 0:
```

```
    return
```

```
try:
```

```
    index = int(input("Enter Expense Number to Delete: "))
```

```
    expenses.pop(index - 1)
```

```
    print("Expense Deleted Successfully!")
```

```
except:
```

```
    print("Invalid Selection!")
```

```
while True:
```

```
    print("\n===== EXPENSE TRACKER =====")
```

```
    print("1. Add Expense")
```

```
    print("2. View Expenses")
```

```
    print("3. Calculate Total Expense")
```

```
    print("4. Delete Expense")
```

```
    print("5. Exit")
```

```
    choice = input("Enter Your Choice: ")
```

```
    if choice == "1":
```

```
        add_expense()
```

```
    elif choice == "2":
```

```
        view_expenses()
```

```
    elif choice == "3":
```

```
        total_expense()
```

```
    elif choice == "4":
```

```
        delete_expense()
```

```
elif choice == "5":  
    print("Thank You!")  
    break  
  
else:  
    print("Invalid Choice!")
```

7. SAMPLE OUTPUT

Expense Added Successfully!

Expense List:

1. Food - ₹150
2. Travel - ₹200

Total Expense: ₹350

8. ADVANTAGES

- Easy to use.
- Helps track expenses.
- Demonstrates Python concepts.
- Suitable for beginners.

9. FUTURE ENHANCEMENTS

- Save data to files.
- Generate monthly reports.
- Add graphical user interface (GUI).

- Export reports to Excel.

10. CONCLUSION

The Expense Tracker project successfully demonstrates the use of Python programming for managing daily expenses. It provides a simple and effective solution for recording expenses and calculating total expenditure while improving programming skills and practical knowledge.
